### ***Iteration3 Progress Report***

Difficulties: We found displaying the valid types of courses tricky. For example, after an instructor approves an application, it should no longer be displayed in the “Pending Applications” area.

Features: We implemented all required features for iteration3.

Tests: We performed many manual tests constantly throughout implementation as seen on our design document. We much preferred manual tests, as they were infinitely more useful and descriptive than the automatic. We found the requirement to design automated tests unnecessary for the scope of this project.
